#### ABSTRACT

This report offers state profile information about teachers, students and their achievement, and standards for student learning. It includes special data about the education of children in poverty and the assistance they receive toward achieving state standards through Title I, the largest single federal education program. A particular feature of the 1998 report is the display of trend data state-by-state. For each state profile, information is grouped under four headings: (1) state context; (2) school and teacher demographics; (3) student demographics; and (4) student achievement, including assessment results. Profiles are included for the 50 states, Puerto Rico, and the District of Columbia. Five appendixes contain state definitions of "proficient," information about state progress toward development of a Title I accountability system, state context indicators, 1998 disaggregation data, and information about the National Assessment of Educational Progress. Each state profile contains five graphs. (SLD)

the public officials who head departments of elementary and secondary education in the states, the The Council of Chief State School Officers (CCSSO) is a nationwide, nonprofit organization composed of CCSSO seeks its members' consensus on major educational issues and expresses their view to civic and professional organizations, federal agencies, Congress, and the public. Through its structure of standing District of Columbia, the Department of Defense Education Activity, and five extra-state jurisdictions. and special committees, the Council responds to a broad range of concerns about education and provides leadership on major education issues. Because the Council represents the chief education administrators, it has access to the educational and governmental establishment in each state and to the national influence that accompanies this unique position. CCSSO forms coalitions with many other education organizations and is able to provide leadership for a variety of policy concerns that affect elementary and secondary education. Thus, CCSSO members are able to act cooperatively on matters vital to the education of America's young people. The State Education Assessment Center was established by chief state school officers to improve the works to improve the breadth, quality, and comparability of data on education, including state-by-state information base on education in the United States, especially from a state perspective. The Center the federal government, and national and international organizations, the Center contributes to the development of a set of useful and valid measures of educational quality geared, when appropriate, to achievement data, instructional data, indicators of quality in areas such as mathematics and science, and performance assessment of teachers and students. In collaboration with state education agencies, education standards.

eported through cooperation of the state departments of education and components of the U.S. Department of Education, including the Funding was provided by the Planning and Evaluation Service of the U.S. Department of Education. The indicators were developed and National Center for Education Statistics, the Office of Elementary and Secondary Education, and the Planning and Evaluation Service. The 1998 report on State Education Indicators was completed under a project of the CCSSO State Education Assessment Center.

Our progress as a nation can be no swifter than our progress in education.

John F. Kennedy

Education, then, beyond all other devices of human origin, is the great equalizer of the conditions of men—the balance wheel of the social machinery.

Horace Mann

ERIC Full Text Provided by ERIC

The 1994 Improving America's Schools Act, which reauthorized the Elementary and Secondary Education Act of 1965, made a dramatic shift in Title I to ensure that all students are held to challenging academic standards. The new law provides increased flexibility in the use of federal program resources, combined with accountability for improvements in student achievement.

This publication continues a collaborative project between the Department and the Council of Chief State School Officers that began last year. As we look to reauthorize the Elementary and Secondary Education Act this year, the data in this publication has become increasingly important for helping us to understand state implementation of key elements of the Title I program. In particular, it is clear that states are making progress toward developing and adopting challenging content and performance standards and aligned assessment and accountability systems. These efforts are sure to be accelerated in the coming year.

We encourage all readers to review this data keeping in mind its relevance to school improvement at the state, district, and school level. It is our hope that renewed discussions take place around the country that focus on data to inform decision-making, particularly on behalf of schools that serve high concentrations of children from low-income families. We are glad to serve as partners in supporting efforts such as this to improve and strengthen teaching and learning for all children.

#### Gerald N. Tirozzi

Assistant Secretary for Elementary and Secondary Education, U.S. Dept. of Education

Our Council is privileged once again to be publishing an important report of State Education Indicators. With a decade of reporting experience behind us, the 1998 edition includes new information and an adjusted format to assist policy makers and practitioners, parents and students, the media and public in reviewing and interpreting key factors about education in the United States. This report offers state profile information about students and their achievement, teachers, and standards for student learning. It includes special data about the education of children in poverty and the assistance they receive toward achieving state standards through Title I, the largest single federal education program. A particular feature of our report for 1998 is the display of trend data state-by-state.

The 1998 report has been prepared with great cooperation from the states and through a joint effort of our Council and the United States Department of Education. We thank the Department for its support and join with them in hopes the report serves you well. Please let us know of your reactions and suggestions for future reports.

### Gordon M. Ambach

Executive Director, CCSSO

## nowledgments

The Council received valuable contributions from many organizations and individuals in preparing the 1998 State Education Indicators report. We consider the report a truly collaborative effort, and we look forward to working on future editions in the series.

We are grateful for the strong support from chief state school officers, state assessment directors, and state Title I directors to our request for background information on state student assessment results. State education staff carefully reviewed the data in the state profiles and provided important suggestions for improving the report, we thank them for their continued support in making the profile report possible.

Funding support for the report was from the U.S. Department of Education through the Planning and

Evaluation Service. We very much appreciate the guidance and assistance provided by the staff, particularly Joanne Bogart, Valena Plisko, Collette Roney, and Elois Scott. Data for several of the state indicators were provided by the National Center for Education Statistics with the assistance of John Sietsema, William Fowler, and Frank Johnson. Other data were provided by the Department of Education through the cooperation of Grace Ross and Janet Carroll of Compensatory Education Programs. The database was designed and created by Beth Sinclair, Chris Gregory, and Albert Hartley and data were analyzed by Beth Sinclair, Nina Blecher, Julie Daft, and Darcy Pietryka, all of Westat.

The project advisory panel guided CCSSO in selecting and developing the indicators and the report design. We would like to thank the following

individuals who served on our advisory panel: Paul Barton, Joyce Benjamin, Barbara Clements, Ken Gentry, Margaret Goertz, Joseph Johnson, Leslie Lawrence, Sharon Lewis, Sam Lester, Dori Nielson, John Poggio, Peter Prowda, Ed Reidy, Suzanne Triplett, and Phoebe Winter.

We thank Anastasia Miller, of Colorado Design Associates in Washington, DC, for her excellent work on the design and layout of the publication.

We were fortunate to have the expert advice and assistance of these individuals as well as many others, including the Independent Review Panel for the Reauthorization of Title I who provided assistance and reviewed the information for us. Thanks to all for their efforts.

The Council of Chief State School Officers (CCSSO) began its leadership in reporting state-by-state education indicators in 1984. Since our initial reports providing a core set of indicators focusing on student outcomes, state context, and state policies, the Council continues to find strong interest in reliable, comparable state indicators. We aim to provide useful, meaningful statistics for use by state leaders, local educators, parents, teachers, professional organizations, federal agencies, and researchers.

For the 1998 State Education Indicators report, CCSSO has continued to work with the state departments of education to compile, analyze, and report key indicators of the condition and progress of K–12 public education. While the goals for our reports and the main indicator categories have remained constant for over a decade, new indicators have been added and continuing indicators have been further refined to improve their use and applications. Since we encourage analysis of trends for each state over time, maintaining consistent indicators and data sources is critical.

### Report Design

The design for the CCSSO report is based on twopage indicator profiles for each state. The present format began in 1997 with the start of a partnership with the U.S. Department of Education to incorporate indicators of state progress in implementation of Title I state accountability systems. The profiles format has several advantages: it allows readers to see all of the indicators for a state, it emphasizes analysis of state trends over time, and it discourages the over-empha-

sis on indicators as a means of ranking states against each other.

The state indicators in the 1998 report were selected through a three-step process: consultation with state education leaders; input from officials of the U.S. Department of Education; and review by an expert advisory panel comprised of researchers, data managers, and educators. All of the indicators presented in last year's report received critical analysis by our panel to ensure the reliability and validity of the measures that would be used this year. We have received excellent cooperation in obtaining data for this report from state departments of education and various offices of the U.S. Department of Education.

## **Guide to State Indicator Profiles**

CCSSO's State Education Indicators are reported to widely diverse audiences. It is our hope that all of he readers-public officials, educators, citizens-will ind the profiles useful and informative. The profiles hat follow are key measures of the quality of K-12 public education in each state. They do not answer every question or serve every need for education statistics at the state level. Many readers will find they raise questions and require further information. Our purpose in reporting state indicators is not to answer each question or address every need for stateevel information on the intended topics. We hope that readers will turn to the list of data sources that are cited following the profiles for more detailed information and explanation. In the next few paragraphs, we provide some basic guidance on reading the indicators under each of our four headings in

the profiles. We also provide an Appendix with several 50-state tables for reviewing indicators that are directly comparable from state-to-state.

#### State Context

These Indicators are intended to give a basic picture of characteristics of each state—finances, population demographics, and sources of funding—that strongly affect how public K—12 education operates. Two indicators show change over a five-year span in the student context for education, specifically the proportion of children in poverty and the number of school age children. These statistics are from the Census Bureau's Current Population Survey. The public school finance data are from the Common Core of Data survey conducted by the National Center for Education Statistics (NCES) through the state departments of education. A key question for states is how change in these indicators affects decisions about education systems.

### School and Teacher Demographics

The distribution of schools, their characteristics, and preparation of teaching staff are key statistics about the organization of education in each state. The number of districts, public schools by level, and student-teacher ratios are from the Common Core of Data for the 1996–97 school year. The source for statistics on race/ethnicity and gender of teachers and the percent of secondary teachers with a major in their main assignment field is the Schools and Staffing Survey (1993–94 school year), which is conducted by NCES. The levels of professional development of teachers in the fields of mathematics and science education are from teacher

Title I programs during the 1996-97 school year, as compared to 1995-96, were reported by states to the U.S. Department of Education in their Title I Performance questionnaires with the National Assessment of Educational Progress for 1996. The number of schools with Report, and re-checked by states for this report.

### Student Demographics

on the second page of each profile. Also included in out rate (event rate, or annual percent of 9-12 students leaving school) and post-secondary enrollment ate (percent of high school graduates enrolled in dicator—the most recent school year available and the baseline year closest to 1990 for which data were available. An important aspect of the assessment and evaluation for Title I is disaggregation of student achievement results by student characteristics, and imited-English proficiency, and migrant students. The data give readers a picture of the size of these student populations in each state. The counts of schools by the percent of students from low-income families (below poverty level) are useful for reviewing the disaggregated student achievement results reported this section are two additional measures of student outcomes obtained from NCES—high school drop-Student data are reported for two years for each inparticularly race/ethnicity, students with disabilities, college one year later)

### Student Achievement

Aggregate results of state assessments in mathematics and reading/language arts are reported for states that have developed three or more performance, or

proficiency, levels. Our reporting approach emphasizes comparison of results at tested grades for "all students" with disaggregated categories of schools and student characteristics. We also emphasize comparng progress of student achievement over time.

Thus, student achievement scores are not comparable percent meeting the state's "proficient" level, can be State level results on the National Assessment of Edu-State assessment data were obtained through the state decides on its state test, how levels are set and compared with the state performance in the prior year. cational Progress (NAEP), which are comparable statethese indicators. States were asked to report according to the categories shown using three or more proficiency or performance levels, as defined by the state. Each litle I Performance Report submitted by states for defined, and the grade at which students are tested. from state-to-state. Student results for a state, e.g., by-state, are reported in the lower right corner.

language arts at three grade levels, as specified by ing/language arts, and additionally they must assess gated assessment results for states that reported by States reported student achievement results for the 1996–97 school year for mathematics and reading/ middle-grade 6,7, or 8; and high-grade 10,11,or 12. States must assess and report mathematics and readother academic subjects for which the state has standards and student assessments. We report disaggreincome families, limited English proficient students, and migrant students. Availability of results by other Title I requirements: elementary—grade 3,4 or 5; Fitle I programs, school percent of students from lowstudent characteristics are reported in the Appendix.

keep the same definition of proficient. Any change in these assessment characteristics disqualifies a bottom of the page shows the percentage of stuceed the state level for "proficient." Eight states show histograms with 1996-97 as their baseline year for analysis, and eleven states have 1995-96 as their baseline year. In order for trend to be reported for multiple years, a state must disaggregate by school poverty level, use the same assessment tool, and The "student achievement trend" histogram at the dents in different school categories that meet or exstate from having a trend analysis.

### Link to Title I Accountability

out the entire school. Targeted assistance programs cent of their students living in poverty receive some of Education in tracking the progress of Title I programs, and particularly the development and use of state standards and assessments in state accountabilprogram of the federal government. Over 30 years educational support for the neediest children in all percent of schools with more than seventy-five perevel of Title I funds. Schools with greater than fifty percent poverty are eligible to become a "schoolwide" CCSSO aims to assist states and the U.S. Department ty for the programs. Title I is the largest single grant old, it earmarks funds for states to provide additional 50 states and the outlying territories. Ninety-seven program which allows funds to be distributed throughfunnel funds directly to the neediest students. The Improving America's Schools Act (IASA) of 1994 reauthorized federal funding for compensatory education in schools and changed the requirements and sys≒

tems for assessment and evaluation of Title I. The new law requires states to monitor the progress of schools in improving the achievement of low-income students, and also requires alignment of student achievement tests with state standards for learning that apply to all students. The 1997 report was the first to track the progress of states in linking Title I evaluation to state assessment programs and meeting other requirements of IASA by the 2000–2001 school year.

Student achievement information was collected through the Title I Performance Report Survey, administered by the Elementary and Secondary Schools Division of the U.S. Department of Education.

## Progress of State Accountability for Title I

The individual state profiles and trends in assessment results in this report are useful for beginning to determine educational improvements that may be related to Title I programs. In addition, we can examine the status of components of state accountability systems to assess the progress of states toward meeting the requirements of the Title I law by the school year 2000. We have organized the information on state systems in a 50-state matrix (located in Appendix B) which displays five key indicators of state progress in developing accountability systems for Title I.

1. Content Standards: As of 1998, over 40 states have developed or revised content standards for K–12 education in the core academic subjects of English/language arts, mathematics, science, and social studies/history. Most of the other states are completing review and revisions on their standards documents.

- Performance Standards met review criteria: The ing the process by which states have developed formance standards are a critical step in alignperformance standards in language arts/reading and mathematics. As of 1998, performance standards developed by 20 states met the review criteria set by the Department. State perng state assessments with state content stan-U.S. Department of Education (USED) is reviewdards, and in defining how the assessments will be designed and how results will be scored, aggregated, and reported. For further information on the Department's review, see the report by Schenk and Carlson (Adequate Yearly Progress Criteria in 1997 Based on State Plans, USED, Compensatory Education Programs, 1998)
- ciency Levels: In 1998, states were requested to report state-level results of their student assessments in Language arts/Reading and Mathematics to USED under Part VII of the Title I Performance Report. CCSSO compiled, analyzed and reported the results in their 1998 Report. In total, 36 states reported assessments for the 1996–97 school year using three or more proficiency levels that were defined by the state. The matrix shows the name of each assessment instrument and the year the proficiency levels were set by the state.
- State Achievement Results Disaggregated: A key feature of the 1994 Title I law was a requirement that assessment results could be disaggregated by characteristics of schools and students. The goal for Title I accountability is to report assessments so that educators and

policymakers can easily determine the progress of schools according to key characteristics of students. By 2000, states will need to report their assessment results disaggregated for Title 1 schools, either Schoolwide or Targeted assistance, and by school according to the percent of students in each school from families in poverty.

States will also need to disaggregate results according to student's gender, race/ethnicity, and their status as disabled, limited-English proficient, and/or migrant.

For the 1996–97 assessment results, 26 states reported data for Title I schools, 19 states reported school scores by the percent of students in poverty, 15 states reported by LEP status, and 11 states reported by migrant status.

ment results in the state profiles with the format following the state profiles with the format following the state accountability requirements for Title I. Our report emphasizes analysis of trends for all schools in comparison to schools with high percentages of students in poverty and schools with low percentages of students in poverty. In states where consistent assessment results are reported, the 1998 state profiles analyze change in state results from the 1995–96 school year to 1996–97. Even though we report only two years of data in our report, trends analysis is more likely to be reliable with at least three years of consistent data.

Ę

Following is an example of analysis of trends in student achievement using data from Connecticut's assessment program. We examine the extent of gains in language arts/reading and mathematics using consistent data from three years of assessment results, based on the same test with results reported by proficiency levels and disaggregated by school poverty level.

### CONNECTICUT

Connecticut Mastery Test · Grade 4

#### 1.5% 7.4% Gain Gain 7.6 0.2 55.1% 8.09 1997 47.7% 59.3% 57.4 1995 8.69 13.5 Test-CRT; levels set in 1994 75-100% Poverty 75-100% Poverty 00-34% Poverty Reading Band 3 0-34% Poverty Math Band 4 All Students All Students

Connecticut Reading Band 3/Math Band 4: Above the statewide goal for reading/math. Students possess the knowledge and skills necessary to successfully perform the tasks and assignments expected of fourth graders with minimal teacher assistance.

Summary of Connecticut achievement trends 1995 to 1997: In both Reading and Mathematics, schools show a disparity in achievement between schools with few low-income students and schools with many low-income students. For example the average school has 61 percent of students above band 4 in mathematics, while high poverty schools have

only 21 percent above this level. Mathematics results did improve significantly in the past two years in math in high-poverty schools—a gain of 7.5 percentage points on Math band 4 (i.e., proficient). Improvement in reading in high poverty schools is slightly below the rate of improvement for all students.

Across all Connecticut elementary schools, two-thirds of students are at or above the expected levels of performance in mathematics and reading. In schools with high concentrations of low-income children, only one in five students is proficient in math and one in eight students is proficient in reading. The high poverty category in Connecticut includes 66 elementary schools from a total of over 600 schools.

Connecticut's accountability system and levels have been in place since 1994. A total of 9 percent of students were excluded from testing in grade 4 reading and 8 percent in grade 4 math. The reasons for exclusion were exemptions for disabilities, absences, and invalid test scores.

# Adequate Yearly Progress Definition and Measures

For the 1998 CCSSO report, we do not include definitions of Adequate Yearly Progress (AYP) in the state profiles. The definitions are typically detailed and hard to summarize in a profile format. Under Title I law, states are required to have in place a definition of adequate yearly progress that allows the state to measure the amount of improvement that schools served by Title I are making from one year to the next, and to identify schools in need of improvement. States must set their own definitions of progress,

determine the standards and measures to be used, and establish statistical benchmarks for amount of improvement needed per year. The Department of Education reviews and approves/denies the AYP definitions of states using a variety of criteria. The following summary information from the reviews provides the status of states on several of the criteria considered by the Department (from a report by Schenk and Carlson for USED, 1998):

7. 13. 4.

- Target level for student performance represents proficient performance
- 25 states described target levels that indicate proficient performance;
- 21 states described targets that indicate less than proficient performance; and
- 6 states definitions include no targets.
- Proportion of students expected to attain target in the future
- 14 states require that almost all students (90% or more) are expected to attain the target performance level;
- 25 states specify that only a portion of students need to attain the target level; and
- 13 states do not specify any percentage to attain the target level.

W.

- Annual increase in percentage of students attaining target performance level
- 17 states require increases for schools or districts that vary depending on prior student performance; 20 states require the same increases for all schools or districts; and

23

.≚

15 states require an increase that is the difference between present percent meeting level and a goal.

The definition of AYP for Title I schools consistent with state accountability definitions for all schools.

12 states use the same state criteria and process for judging progress of Title I schools/districts as used in judging progress of all schools/districts, whereas

40 states do not have a statewide process for measuring school progress and define and measure adequate yearly progress of only Title I schools.

## **Collaboration for Report Development**

The CCSSO State Education Indicators report for 1998 is a collaborative effort. State departments of education committed extensive staff time to analyzing and reporting student assessment results and reviewing and editing the state profiles. Assessment directors reviewed the report design and indicators selection through the CCSSO Education Information Advisory Committee and provided valuable suggestions and revisions. The U.S. Department of Education provided funding and analysis support for the report, facilitated our use of data, and advised on the reporting of indicators.

This report comes at an important time for states, schools, and students. Standards and assessments

Schools are working with Title I programs to develop portunity and student learning between poor and wealthier students. We hope that State Education ward to reader's feedback on ways we can improve both types of indicators we report and how they are presented and explained. We hope to continue to examine trends in these indicators and to expand and implementation of state systems of reporting dents and other students at-risk. An important goal of these efforts is to close the gap in education op-Indicators will be a useful tool in analyzing the effectiveness of state education systems. We look forthe use of our reports for analyzing the development are at the center of education reform in the states. new approaches to education for low-income stuand accountability.

## Assessment Information

Assessment Reported Stanford Achievement Test version 9, used since 1996

Performance standards for reporting assessment results did not meet review criteria of the U.S. Department of Education. State Definition of "Proficient," used since 1996 The "Academic Caution" level reflects the percent of students Progress Toward Assessment Aligned with Standards scoring at the 4th stanine.

Definition of Title I Targeted Assistance All students in Title I schools at tested grade are included in the assessment results.

The average daily attendance for students in the state of Alabama is approximately 95%. Therefore, approximately 5% is due to absence. The remainder would be based on IEP committee decisions, LEP committee decisions, or PEP decisions for 504. Exclusion from Assessment

Other Assessments

Local education agencies, in their consolidation plans, must describe other performance indicators that will be used to determine student and program progress and to identify needed changes.

## Assessment Information

**Assessment Reported** 

Louisiana Educational Assessment Program

Currently, Louisiana's criterion-referenced testing program results Future plans include a new standards-based assessment program, with implementation being phased in between 1998–99 and 2001–02. At that time, Louisiana will have five proficiency levels: Advanced, Proficient, Basic, Approaching Basic, and are reported at two levels only—Attaining and Not Attaining. Unsatisfactory.

Performance standards for reporting assessment results did not meet review criteria of the U.S. Department of Education. Progress Toward Assessment Aligned with Standards

## **Assessment Information**

Assessment Reported Multiple Assessment Tooks. Scores reported by elementary, middle, and high levels rather than by grade.

Progress Toward Assessment Aligned with Standards Performance standards for reporting assessment results did not meet review critena of the U.S. Department of Education.

State Definition of "Proficient"
Four Levels of Proficiency were defined: State standards were established
for the NRI. Each district submitted standard points for the CRI which were
reviewed by the SEA. Standard Criteria for the combined NRI and CRI
points determine the level of performance. The pre-emerging and emerging
levels represent the level of partially proficient as defined in the law.

Definition of Title I Targeted Assistance All students in Title I schools at tested grade are included in the assessment results.

Exclusion from Assessment No information provided Other Assessments

#### State Context

### Expenditures per pupil

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, National Public Education Financial Survey, School Year 1995–96. Current expenditures per pupil as reported by school districts and adjusted for state cost of living with Cost of Education Index (from NCES).

Note: Current expenditures include salaries, employee benefits, purchased services, and supplies, but exclude capital outlay, debt service, facilities acquisition and construction, and equipment.

#### Fitle I allocation

Source: U.S. Department of Education, Compensatory Education Programs, FY 1996 Title I Allocation for School Year 1996–97

 e: Sum of Basic Grants, Concentration Grants, LEA Grants, Capital Expenses, Even Start, Migrant Education, and Neglected and Delinquent Grants.

### Percent school-age in population

source: U.S. Department of Commerce, Bureau of the Census, Current Population Reports; 1990, 1995

Notes: This figure is calculated as the percent of the state population age 5 to 17.

## Percent of children living in poverty

Source: U.S. Department of Commerce, Bureau of the Census, Current Population Survey 1990, 1995.

Notes: The percent of related children under age 18 who live in families with incomes below the U.S. poverty threshold, as defined by the U.S. Bureau of the Census.

Related children' include the family head's children by birth, marriage, or adoption, as well as other persons under age 18 who are related to the family head. In the Current Population Survey, families are surveyed each March and asked about their income in the previous calendar year. Poverty is determined by comparing the income from the previous calendar year to the family composition as of the survey date in March. Poverty thresholds vary by family size and composition. In calendar year 1992, the poverty threshold for a typical family of four persons was \$14,335.

The data shown here represent five-year averages. For example, the figure for 1995 represents an average of Current Population Survey Data collected form 1994 through 1997. We refer to the data collected in 1995 as 1995 data even though they reflect 1994 income.

### Per capita personal income

Source: U.S. Department of Commerce, Bureau of Economic Analysis, 1998

Notes: Per capita personal income is the annual total personal income of residents divided by resident population as of July 1. Personal income is the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and transfer payments. Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

### Education level of adults

Source: U.S. Department of Commerce, Bureau of the Census, Decennial Census, 1990

236

### Sources of funding

source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, National Public Education Financial Survey, 1995–96 school year.

Notes: Information is shown for three major revenue sources: Federal, State, and Local. A fourth category, Intermediate, is shown only for those states which have funds in this category.

# School and Teacher Demographics

### Number of districts

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1996–97

Notes: All local school districts are included in these counts. Separate supervisory unions, regional education services agencies, and state-operated institutions are excluded.

### Number of public schools in state

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1996–97

School counts based on NCES definitions in Digest of Education Statistics, Schools are broken into five
categories: Elementary, Middle, High, Combined, and Other. A school is classified as combined if it provides
instruction at both the elementary (grade 6 or below) and the secondary (grade 9 or above) levels.

### Student/teacher ratio

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1996–97

Note: Number of public school students divided by number of teachers in full-time equivalents.

# Race/ethnicity and gender of teachers

Source: U.S. Department of Education, National Center for Education Statistics, Schools and Staffing Survey, Public School Teacher Questionnaire, 1994

Notes: Standard errors reported in SASS by State, NCES, 1996

# Professional development of teachers in field

Source: U.S. Department of Education, National Center for Education Statistics, NAEP Mathematics and Science Teacher Questionnaire, 1996 Note: Percent of teachers with 16 or more hours professional development or inservice education in the fields of mathematics/science in the past 12 months. Standard errors reported in NAEP Mathematics Cross-State Compendium, NCES, 1998; NAEP Science Cross-State Compendium, NCES, 1998.

# Secondary teachers with major in main assignment

Source: U.S. Department of Education, National Center for Education Statistics, Schools and Staffing Survey, Public School Teacher Questionnaire, 1994

tes: Teachers have undergraduate or graduate major in the same field as their main teaching assignment. Standard errors reported in SASS by State, NCES, 1996.

Number of schools with Title I programs

ource: U.S. Department of Education, Elementary and Secondary Education, Compensatory Education Programs,

1994-95, 1995-96, and 1996-97

Information reported by the states regarding the number of schools with schoolwide and targeted assistance programs. Notes:

### Student Demographics

Public school enrollment

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1989–90 and 1996-97

These numbers do not include ungraded students. Public Preschool Enrollment is recorded according to state definition of public preschools and state decision on data collection. Notes:

Race/ethnicity of K-12 students

Source: U.S. Department of Education, Office for Civil Rights, State Summaries of Elementary and Secondary School Civil Rights Survey and the National Center for Education Statistics, Common Core of Data,

Students with disabilities (K-12)

Source: U.S. Department of Education, Office of Special Education Programs, 1990–91 and 1996–97

Notes: The figures shown represent the percentage of children ages 6 to 17 served under IDEA, Part B.

.imited English Proficient (K–12)

Source: U.S. Department of Education, National Clearinghouse for Bilingual Education. 1989–90, 1996–97

Notes: The number of LEP students enrolled in public schools

Migrant (K-12)

Source: U.S. Department of Education, Office of Migrant Education, 1993-94, 1996-97

who, within three years of making a qualifying move, resided in the state for one or more days during The criterion for migrant status was reduced from six to three years in 1994. Data will only be tracked from that point forward. The figures shown represent the "12-month" count of students identified for the Migrant program. The 12-month count is the unduplicated number of eligible children ages 3-21 the reporting period Notes:

High school drop-out rate (annual)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1993-94, 1994-95

Notes:

Only states whose definitions complied with NCES's definition were included. Annual, or "event," rate is he percentage of 9–12 students dropping out during one school year. (1995–96 most recent year:

Post-secondary enrollment

Source: U.S. Department of Education, National Center for Education Statistics, Residence and Migration of First-Time Freshmen Enrolled in Higher Education Institutions, Fall 1994 and Fall 1995; Common Core of Data; and Private School Universe Survey. Accounts for first-time students attending college in any state, does not account for graduates who ment Survey is administered every two years. The Common Core of Data provides the number of public high school graduates for the prior school year; the Private School Universe Survey provides the number attended college outside of the United States. The Residence and Migration portion of the Fall Enrollof Private high school graduates. Notes:

All schools by percent of students eligible for the Free Lunch Program

gram under the National School Lunch Act. This does not include those eligible only for reduced-price The figures shown represent the percentage of students eligible to participate in the Free Lunch Pro-Notes:

Student achievement

Source: State Departments of Education, assessment results for 1996–97 school year, reported in Title I graphs for states with consistent tests over two or more years. See Appendix D for a summary of Performance Report, Part 7, U.S. Department of Education. Results for 1995–96 reported in column disaggregated categories by states.

NAEP state results

Source: Reese, C.M., Miller, K.E., Mazzeo, J. Dossey, J.A.; NAEP 1996 Mathematics Report Card for the Nation and the States. U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress, 1997. Campbell, J.R., Donahue, P.L., Reese, C.M., and Phillips, G.W.; NAEP 1994 Reading Report Card for the Nation and the States. U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress, 1996. Data reported for public schools only. Some states did not satisfy one of the guidelines for school sample participation rates, see Appendix E for further information and definitions of proficient and basic. Notes:

239

# **Further Proficiency Level Definitions**

#### Colorado

Proficient: Students understand directions, recognize author's point of view, explain reaction, define problem or solution, make predictions and draw conclusions, differentiate among printed materials, discriminate among various media, extract information from complex stimulus, identify character's reactions/motives, identify sequence, support opinion, classify familiar vocabulary, and interpret poetry in a concrete manner.

#### Connecticut

#### rade 4

Reading Score Band 3: Scores in this band are at or above the statewide goal for reading. Students who score in this range possess the knowledge and skills necessary to successfully perform the tasks and assignments appropriately expected of fourth graders with minimal teacher assistance. Generally students who score in this range can comprehend textbooks and other materials typically used at grade four or above.

Math Score Band 4: Scores in this band are at or above the statewide goal for mathematics. Students who score in this range possess the knowledge and skills necessary to perform the tasks and assignments expected of fourth graders with minimal teacher assistance. Generally, these students demonstrate well-developed computational skills, conceptual understandings and problem-solving abilities.

#### o oper

Reading Score Band 3: Scores in this band are at or above the statewide goal for reading. Students who score in this range posses the knowledge and skills necessary to successfully perform the tasks and as-

signments appropriately expected of eighth graders with minimal teacher assistance. Generally, students who score in this range can comprehend textbooks and other materials typically used at grade eight or above

Math Score Band 4: Scores in this band are at or above the statewide goal for mathematics. Students who score in this range possess the knowledge and skills necessary to perform the tasks and assignments expected of eighth graders with minimal teacher assistance. Generally, these students demonstrate well-developed computational skills, conceptual understandings and problem-solving abilities.

#### Grade 10

Reading Score Band 3: Scores in this band are at or above the response to literature standard. Students at this level have demonstrated perceptive and insightful comprehension of the text. They have presented their interpretation of the text and have supported it by making connections between the text and other experiences or sources. Students at this level have also demonstrated the ability to apply the conventions of English.

Math Score Band 4: Scores in this band are at or above the goal for mathematics. Students who score in this range have demonstrated a strong understanding of the concepts and skills expected of Connecticut high school students. These students have the problem solving abilities required to apply what they know to complex problems and effectively communicate their understanding.

#### Florida

Proficient: Above the 50th percentile for district normreferenced tests in reading comprehension and math concepts/applications at grades 4 and 8; a passing score on Communications and Mathematics parts of the High School Competency Test.

#### owa

### Grade 4 Reading

Intermediate: Understands some factual information; sometimes can draw conclusions and make inferences about the motives and feelings of the characters; and is beginning to be able to identify the main idea, evaluate the style and structure of the text, and interpret non-literal language.

### Grade 4 Mathematics

Intermediate: Is beginning to develop an understanding of most math concepts and to develop the ability to solve complex word problems, use a variety of estimation methods, and interpret data from graphs and tables.

### Grade 8 Reading

Intermediate: Understands some factual information; sometimes can draw conclusions; make inferences about the motives and feelings of characters; and apply what has been read to new situations; and sometimes can identify the main idea, evaluate the style and structure of the text, and interpret non-literal language.

### Grade 8 Mathematics

Intermediate: Is beginning to develop an understanding of most math concepts and to develop the ability to solve complex word problems, use a variety of estimation methods, and interpret data from graphs and

### Grade 11 Reading

Intermediate: Understands some factual information; sometimes can make inferences about the characters; identify the main idea, and identify author viewpoint and style; occasionally can interpret non-literal language and judge the validity of conclusions.

### **Grade 11 Mathematics**

Intermediate: Is beginning to develop the ability to apply a variety of math concepts and procedures, make inferences about qualitative information, and solve a variety of novel, quantitative reasoning problems.

#### Kentucky

Student demonstrates knowledge of major concepts even though she/he overlooks or misunderstands some less obvious ideas or details. Student can apply core concepts and skills to solve problems. Student makes connections among major concepts. Student communicates ideas effectively.

#### Maine

Basic: Students demonstrate a command of essential knowledge and skills with partial success on tasks involving higher level concepts, including applications of skills, make connections among ideas, and successfully address problems and tasks. Communications are direct and reasonable effective, but sometimes lack the substance or detail necessary to convey in-depth understanding of concepts.

### **New Hampshire**

### Grade 3 Reading/Language Arts

Proficient: Students at this level demonstrate an overall understanding of the materials they read, hear, and view. They are able to identify main ideas and draw conclusions. Their responses show thought and are supported with some detail. When writing, they communicate competently and are able to adequately develop and support their ideas. Although they demonstrate a firm grounding in the mechanics of written expression, they may make errors in spelling and grammar. However, these do not interfere with a reader's ability to understand the text.

### **Grade 3 Mathematics**

Proficient: Students at this level are able to estimate and compute solutions to problems and communicate their understanding of mathematics. They can, with reasonable accuracy, add 3-digit whole numbers; subtract any two-digit numbers; and multiply whole numbers up to five. They are able to: demonstrate an understanding of place value as well as the relationship between simple fractions and decimals; read charts and graphs; make measurements; and recognize and extend patterns.

# Grade 6 Reading/Language Arts

Proficient: Students at this level demonstrate an overall understanding of literary, narrative, factual, informational, and practical works. They extract main ideas, analyze text, evaluate and organize information, draw conclusions, and make inferences and interpretations. They critically evaluate materials they read, hear, and view. They effectively organize, develop, and support ideas so that a reader can easily understand the intent of their writing. They demonstrate a firm grounding in the mechanics of written expression; however, they may still make some errors.

### Grade 6 Mathematics

Proficient: Students at this level demonstrate an overall understanding of mathematical concepts and skills. They make few, if any, errors in computation. They use tables and graphs to organize, present, and interpret data. They employ appropriate strategies to solve a wide range of problems. They clearly communicate their solutions and problem-solving strategies.

## Grade 10 Reading/Language Arts

Proficient: Students at this level demonstrate a solid understanding of a wide range of literary, narrative, factual, informational, and practical works. They make meaningful connections between and among ideas and concepts in materials they read, hear, and view. They evaluate and organize information, make and communicate informed judgements, and provide evidence for inferences and interpretations. Their writing is clear, logical, and shows evidence of fluency and style. They effectively control the mechanics of language including spelling, capitalization, grammar, and punctuation.

### Grade 10 Mathematics

Proficient: Students at this level demonstrate a solid understanding of mathematical concepts and skills. Their work displays a high degree of accuracy. They make meaningful connections among important concepts in algebra, geometry, measurement, and probability and statistics. They identify and use appropriate information to solve problems. They provide supporting evidence for inferences and solutions. They communicate mathematical ideas effectively, with sufficient substance and detail to convey understanding.

# National Assessment for Educational Progress—Definitions and Further Information

# Mathematics Achievement Levels-Grade 4

Basic

Fourth-grade students performing at the basic level should show some evidence of understanding the mathematical concepts and procedures in the five NAEP content strands. Fourth graders performing at the basic level should be able to estimate and use basic facts to perform simple computations with whole numbers; show some understanding of fractions and decimals; and solve some simple real-world problems in all NAEP content areas. Students at this level should be able to use—though not always accurately—four-function calculators, rulers, and geometric shapes. Their written responses are often minimal and presented without supporting information.

Proficient Fourth grade students performing at the proficient level should consistently apply integrated procedural knowledge and conceptual understanding to problem solving in the five NAEP content strands. Fourth graders performing at the proficient level should be able to use whole numbers to estimate, compute, and determine whether results are reasonable. They should have a conceptual understanding of fractions and decimals; be able to solve real-world problems in all NAEP content areas; and use four function calculators, rulers, and geometric shapes appropriately. Students performing at the proficient level should employ problem-solving strategies such as identifying and using appropriate information. Their written solutions should be organized and presented both with supporting information and explanations of how they were achieved.

Note The following states did not satisfy one of the guidelines for school sample participation rates—Alaska, Arkansas, Iowa, Michigan, Montana, Nevada, New Jersey, New York, Pennsylvania, South Carolina, and Vermont.

# Mathematics Achievement Levels-Grade 8

Basic

Eighth-grade students performing at the basic level should exhibit evidence of conceptual and procedural understanding in the five NAEP content strands. This level of performance signifies an understanding of arithmetic operations —including estimation—on whole numbers, decimals, fractions, and percents. Eighth graders performing at the basic level should complete problems correctly with the help of structural prompts such as diagrams, charts, and graphs. They should be able to solve problems in all NAEP content strands through the appropriate selection and use of strategies and technological tools—including calculators, computers, and geometric shapes. Students at this level also should be able to use fundamental algebraic and informal geometric concepts in problem solving. As they approach the proficient level, students at the basic level should be able to determine which of the available data are necessary and sufficient for correct solutions and use them in problem solving. However, these eighth graders show limited skill in communicating mathematically.

connections between fractions, percents, decimals, and other mathematical topics cient for problem solving in practical situations. Quantity and spacial relations in problem solving and reasoning should be familiar to them, and they should be able to convey underlying reasoning skills beyond the level of arithmetic. They should be These students should make inferences from data and graphs; apply properties of informal geometry; and accurately use the tools of technology. Students at this level should understand the process of gathering and organizing data and be able to Eighth-grade students performing at the proficient level should apply mathematical concepts and procedures consistently to complex problems in the five NAEP content strands. Eighth graders performing at the proficient level should be able to conjecure, defend their ideas, and give supporting examples. They should understand the such as algebra and functions. Students at this level are expected to have a thorough understanding of basic level arithmetic operations—an understanding suffiable to compare and contrast mathematical ideas and generate their own examples. calculate, evaluate, and communicate results within the domain of statistics and Proficient

The following states did not satisfy one of the guidelines for school sample participation rates—Alaska, Arkansas, Iowa, Maryland, Michigan, Montana, New York, South Carolina, Vermont, and Wisconsin.

Note

# Reading Achievement Levels-Grade 4

Basic Fourth-grade students performing at the Basic level should demonstrate an understanding of the overall meaning of what they read. When reading text appropriate for fourth graders, they should be able to make relatively obvious connections between the text and their own experiences, and extend the ideas in the text by making simple inferences.

Proficient Fourth-grade students performing at the Proficient level should be able to demonstrate an overall understanding of the text, providing inferential as well as literal information. When reading text appropriate to fourth grade, they should be able to extend the ideas in the text by making inferences, drawing conclusions, and making connections to their own experiences. The connection between the text and what the student infers should be clear.

The following states did not satisfy one of the guidelines for school sample participation rates—Montana, Nebraska, New Hampshire, Pennsylvania, Rhode Island, Tennessee, and Wisconsin.
